

Expertly designed and developed for seamless web conferences, remote work, remote lectures, open-concept offices and more!

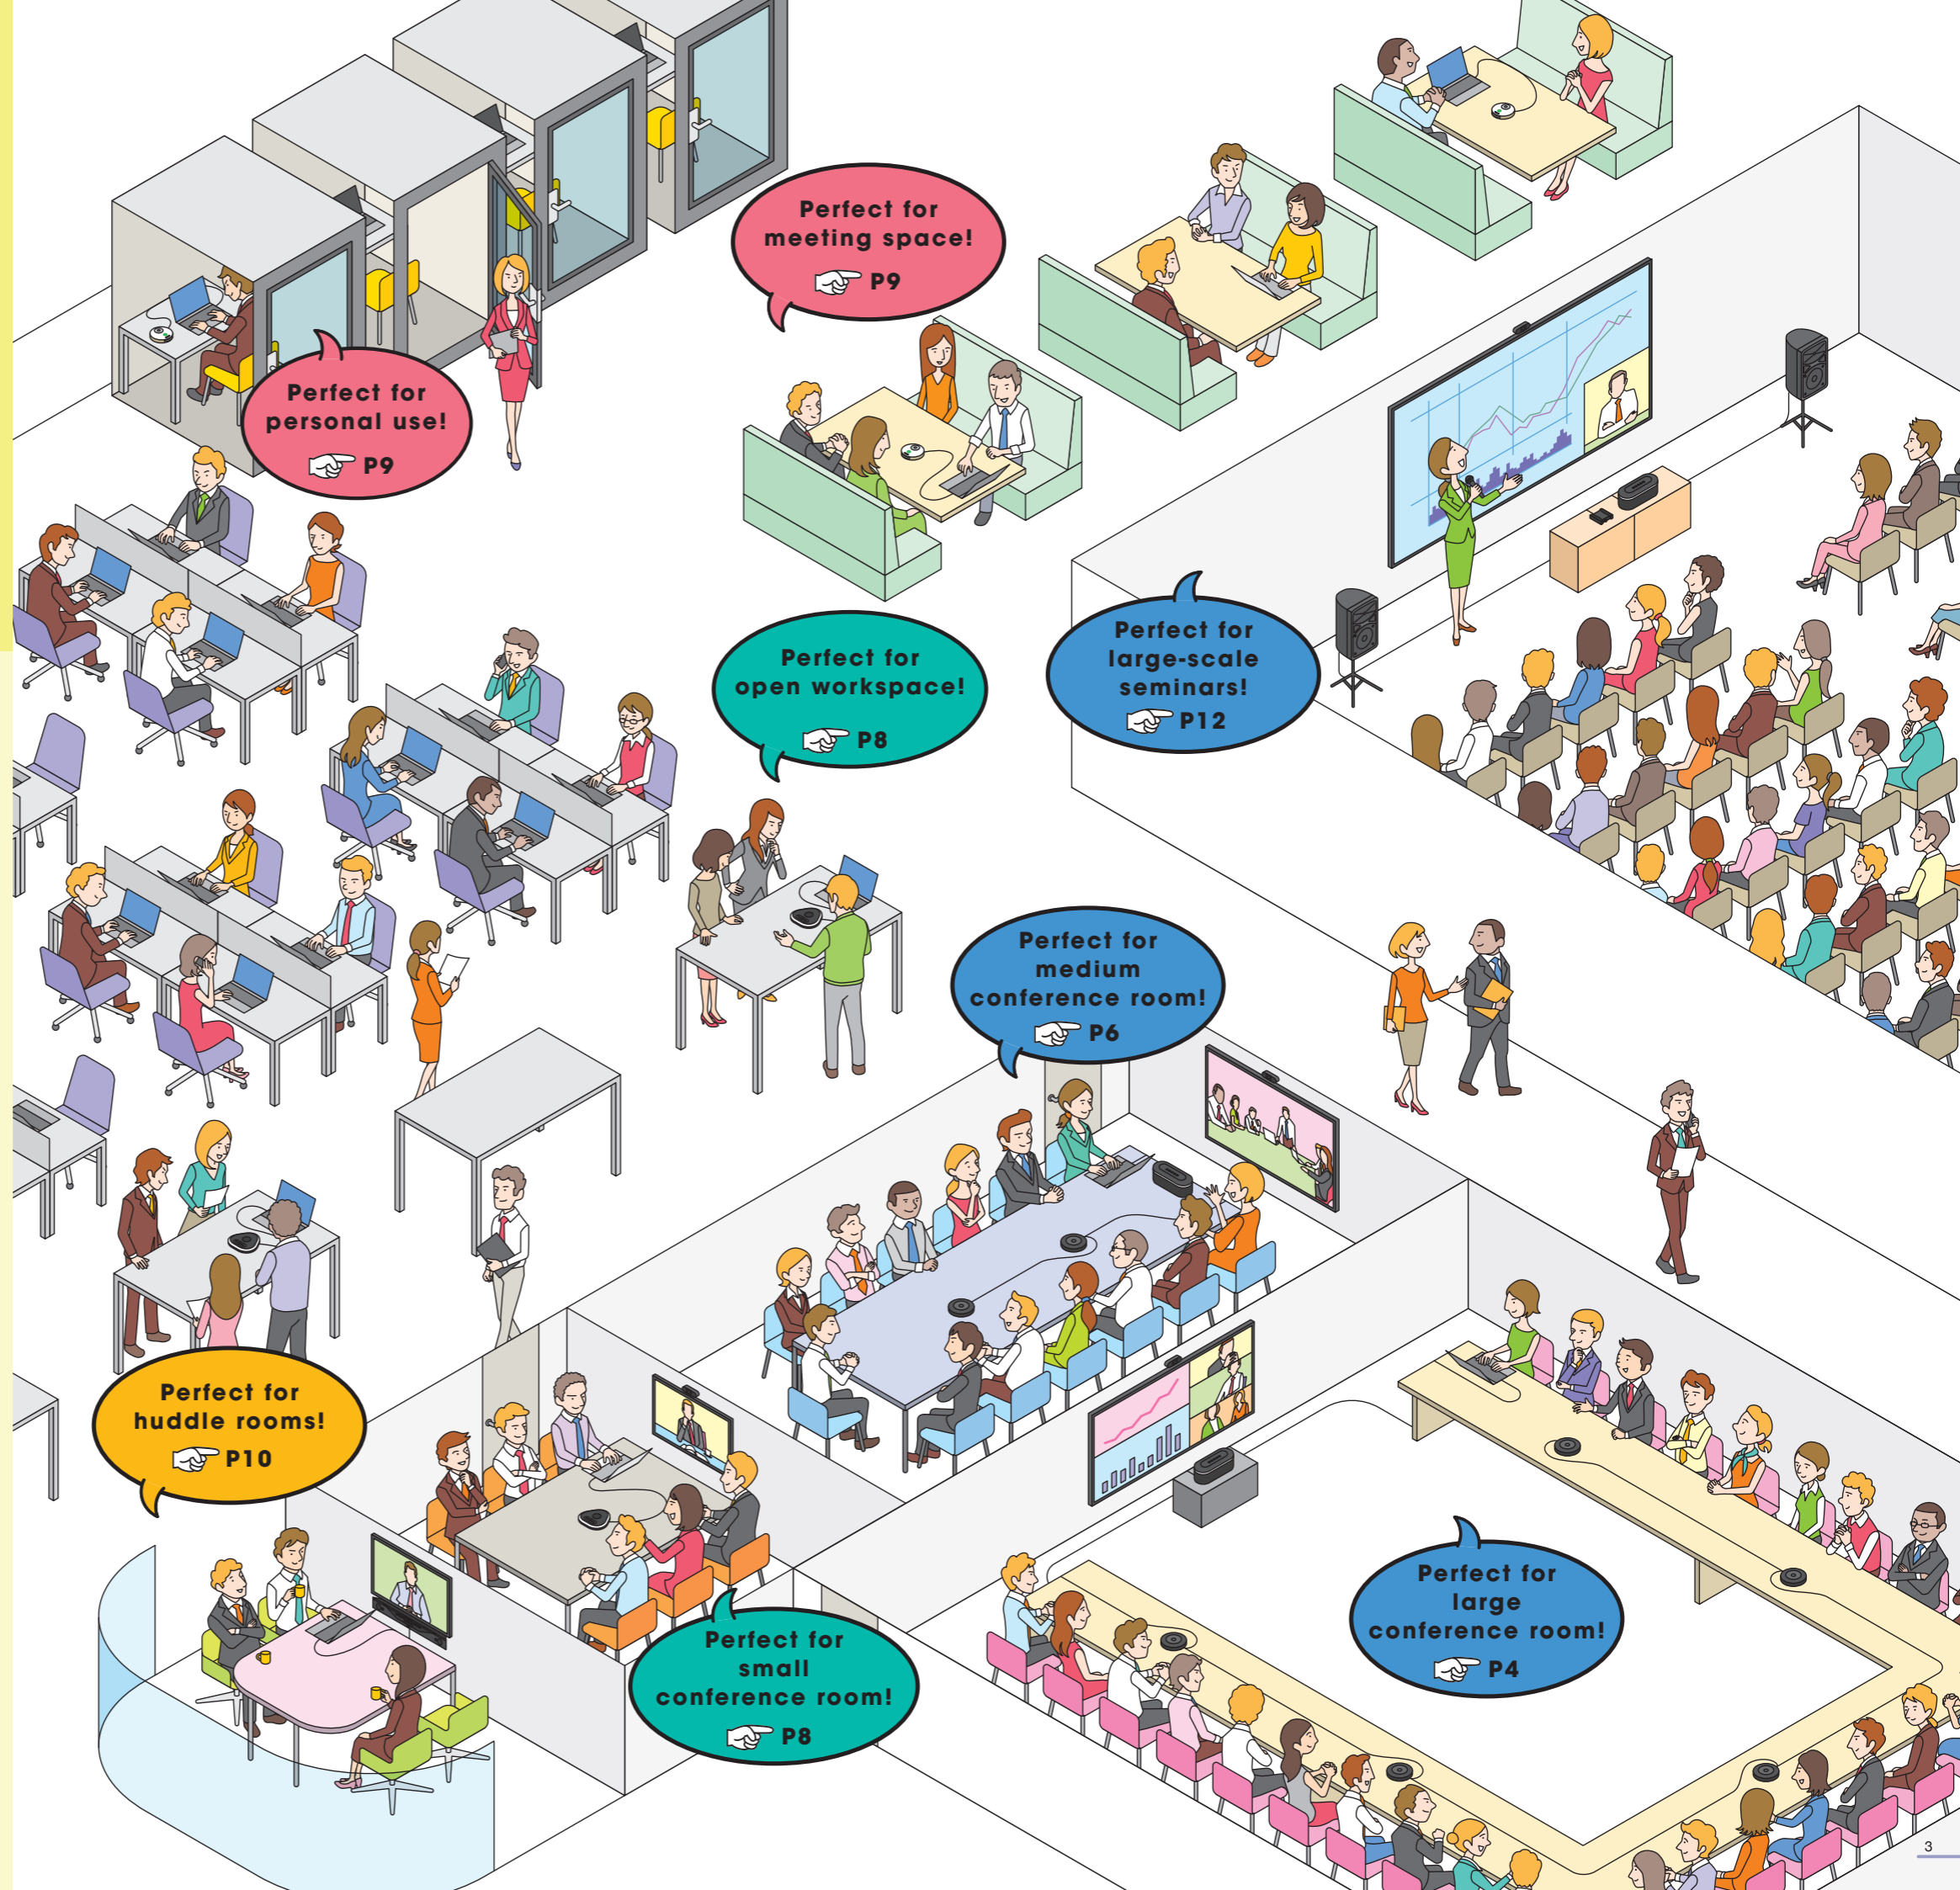

Unified Communications Products

Solutions for Enhancing Communications Everywhere!

With a wide range of products and features, we offer device configurations that perfectly match your room size, group size, and situation

Yamaha Unified Communications products are used in a variety of situations, such as web conferences, remote lectures, remote medical care, and on the go workspaces. Remote collaboration happens everywhere, so such devices need to be extremely convenient as they allow for smooth communication regardless of the place. However, in order to achieve maximum efficiency and performance, the right combination of devices for the application and scale is necessary. Starting on the next page, we'd like to introduce solutions including device configurations and installation illustrations for each use case. We hope you find a combination that is perfect for you.

Large Conference Room

Even with a large screen, high volume, and many participants, YVC-1000 delivers clear audio providing a teleconference that feels natural and intimate.

Using SoundCap makes the YVC-330 pick up sound while significantly reducing sound 1 m or more away from the device. This lets you suppress distracting noise around you to clearly deliver the voices of conference participants to the remote party.

Huddle Room

With a single USB connect to PC, the video sound bar is good to go.

Configuration Devices (Yamaha Products)

Video Sound Collaboration System for Huddle Rooms

- 1 CS-700AV/CS-700SP: x1

Other Requirements

- 2 PC
- 3 Web conference software
- 4 Display

Connection Illustration

Connecting the wired extension microphone allows for conferences of about 10 people.

Connecting the wireless extension microphone solution allows additional microphone pick-up in a room without having to wire the room with audio cables, allowing for a clean extension of the microphone capture of the CS-700.

* The optional extension microphone "XM-CS-700" is required.

Lecture Hall/Seminar Room

Hold remote lectures or remote seminars without purchasing expensive equipment. Connecting an external hand-held microphone lets you amplify your voice for those in the room while also transmitting your voice to the remote location.

Lecture Hall/
Seminar Room

YVC-1000

About 200
people

Points

- You can transmit lectures or seminars to remote locations without purchasing large-scale expensive equipment.
- By connecting an external hand-held microphone, you can amplify the presenter's voice for those in the room while simultaneously delivering it to the remote location.
- Since you can connect 2 external microphones, you can use them for various applications, such as having the presenter hold one, and having attendees use the other.

Configuration Devices (Yamaha Products)

Unified Communications Microphone & Speaker System

- 1 YVC-1000: x1 (Includes 1 microphone)

Other Requirements

- 2 Powered speakers: x2
- 3 Wireless microphone system
- 4 PC
- 5 Web conference software
- 6 Web camera
- 7 Projector
- 8 RCA cable (For connecting the YVC-1000 and the powered speakers)
- 9 RCA-phone cable (For connecting the YVC-1000 and the wireless microphone system)

Techniques for Using the YVC-1000

To hold a true-to-life teleconference, remote seminar, or remote lecture.

Use the hand-held microphone to deliver your voice to the whole hall.

<External Microphone Connection>

Connecting a hand-held microphone to the YVC-1000's audio input terminals allows you to output the presenter's voice from the YVC-1000's built-in speaker. Of course, their voice is also transmitted to the remote location.

Required Equipment

Wired or wireless hand-held microphone
*See our homepage for verified devices.

Connecting a hand-held microphone lets you transmit your voice to the remote location while amplifying the presenter's voice in your location.

Connect speakers to deliver the high-volume conversations to the hall.

<External Speaker Connection>

Connecting speakers with built-in amplifiers to the YVC-1000's external speaker terminals allows you to hold teleconferences with higher volume. This enables you to deliver the voice from the remote location to large groups evenly, even in large halls.

Required Equipment

Speakers with built-in amplifiers / Mixer with built-in amplifiers + speakers
*See our homepage for verified devices.
